

16<sup>th</sup> March 2025

To Whom It May Concern:

I am pleased to write this letter in support of Abdul Moiz. I have known Abdul for three years, during which he was a student in the Software Development Group Project and Object-Oriented Programming modules that I teach for BSc Computer Science and BEng Software Engineering courses. I also had the privilege of supervising his final year project.

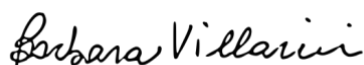

Abdul was a talented and dedicated student, consistently demonstrating strong analytical thinking and problem-solving skills. His academic performance reflected his hard work and ability to grasp complex concepts in software development, mobile computing, and networked applications. Throughout his studies, he has shown an excellent aptitude for programming and system design, excelling in both theoretical understanding and practical implementation.

In class, Abdul was an active participant, contributing valuable insights and engaging in discussions that enriched the learning experience for his peers. He showcased strong teamwork and leadership abilities in group projects, ensuring that tasks were executed efficiently while fostering a collaborative environment.

For his final year project, Abdul developed a mobile application for artists, providing them with a platform to publish their work and connect within a professional network. This project required expertise in mobile app development, user experience design, and backend integration, all of which he handled proficiently. His project was well-researched, demonstrating a deep understanding of both technical and user experience challenges. He also approached the development process with innovation and creativity, exploring ways to enhance usability and engagement for artists.

Abdul's strong technical skills, problem-solving abilities, and proactive approach make him a valuable asset in both academic and professional environments. Whether in a research setting or an industry role, I am confident that he will excel in solving complex challenges and contributing innovative solutions. His ability to work both independently and collaboratively, coupled with his enthusiasm for technology, makes him a strong candidate for any opportunity. I highly recommend him, and I would be happy to provide further details if needed.

Sincerely,

Dr Barbara Villarini  
Reader (Associate Professor) in the School of Computer Science and Engineering  
University of Westminster
